Patient Proximity Study (PPS) Applications

Locate Strategy's proprietary world-class Platform was created to be an unbiased source for all location-related issues, including **startup location decisions, practice purchase evaluations, due diligence, and evaluation of existing practice markets for potential moves, expansions, and more.**

The PPS is a key component of the Platform. The PPS displays the patient dispersion on a map and provides up to five custom-selected radius or drive-time layers that show the number and percentage of patients in each layer in relation to the existing practice location.

Knowing Patient Dispersion might be the most vital due diligence information to have. Issues to Consider:

- Purchase Negotiations
  - o If you are buying a practice, what is the main asset involved? **The Existing Patient Base.**
  - o Once you know where your existing patients are located, consider these questions:
    - Is a patient 5 minutes away more valuable than a patient 20 minutes away?
    - Is there a higher risk of retaining the patient located further from the office during a transition?
    - All things equal, is a Practice with 65% of its patients within a 10-minute drive time worth more than a practice with 40% of its patients within a 10-minute drive?
- Business Planning, Ongoing Operations, and Marketing
  - o Determine areas of patient concentration for focused marketing for referrals and areas of opportunity
- Evaluating New Locations or Moving an Office
  - o Determine what overlap exists if a second location is added
  - o Which patients would be likely to move to your second location?
  - o If relocating your office to a new location (outgrown existing space), you can determine how that location accommodates the existing patient base.
  - o The full picture of the market for a current or proposed location including competition analysis and 19 demographic factors can be obtained in a corresponding Location Study or Location Demographics report.

In addition, you can select up to six data categories from your CRM to be analyzed by layer. Contact us for more details.
